# Template + Content System

## QARC4Revit Content

### QARC4Revit Generic Library

- Nearly 13,000 items, and growing.
- Both Families & System Families [2].
- Available with **QARC4Revit Premium+**.
- They all work!

### QARC4Revit Explorer Free Library

- Around 2000 items.
- Also, within the main library.

## Ctrl+F to Search
*(Activate PDF Viewer)*

### Manufacturers' Content

Available to all registered users.

- Allkind Timber Doors & Windows
- Ecoblock
- LevelMaster
- Littlehampton Bricks
- National Masonry
- NITO Tiles
- Safteline Jalousie
- Weathertex

### Features of the QARC4Revit plug-in

- Unique ability to Drag+Drop, within Revit.
- Items brought from the QARC Content Browser into your project.
- World First Technology for System Families [2].
- The associated materials are brought with the Drag+Drop process onto your C: drive where Revit expects to find them.
- The content works best with the ARChetype template.

# QARC4Revit Generic Library

*The images are a representation of the content, with total numbers available shown on the left. Families are parametric unless the item is manufactured as a specific size.*

## Need New Content?

### Already a QARC Subscriber?
We are happy to make items as you request them. Just give us a few days.
Everybody benefits, as these join the big library.

### Become a QARC Subscriber!
Join in and benefit from the 12,000+ library.
And contribute to requests for added content.

# Footnotes

**1    Window Frame Types**

Modern    Timber joinery.  Modern methodology whereby item arrives onsite in a frame, with frame matching finished depth of wall including cladding.  Height and Width are the overall size, ie OUTSIDE the 'frame'.

Traditional    Timber joinery.  These windows and doors reflect traditional methods of inserting joinery into older buildings with panels supplied and the frame built on site.  Height and Width are the panel sizes, ie INSIDE the 'frame'.

Frame    Timber or Aluminium joinery.  With timber, it is similar to modern but with frame having a set depth, suitable for many wall types, especially masonry.  All Aluminium joinery is in Frames, as per industry standard.

**2    System Families**

In Revit, System Families are items like Roofs, Floors, Walls, Ceilings, Stairs, Fascias.  This also includes Dimensions, Text, Hatches.  Anything that can only be created within a Project.  QARC4Revit has the unique ability to Drag+Drop these System Families into a project.  We create all System Families for correct & immediate use.  EG Walls have their external layer unlocked so you can use the Base & Top Extension option.

**3    Annotations**

Some annotations also exist within the QARC4Revit ARChetype template.

**4    Floors, Roofs, Walls, Ceilings, Soffits**

These System Families are provided in a range of framing sizes.  Walls are additionally supplied with many choices of claddings on both sides.
